

■ NASA Prep — Day 2 Success Snapshot

This document captures the verified environment setup and successful import test for the NASA Internship Development project. It confirms the working Python interpreter, core dependencies, and LightGlue readiness.

■ Environment Details

Python Version: 3.12.0

Interpreter Path:

C:\Users\ddkab\Documents\GitHub\Tufts-NASA-Intership\NasaVEnv\Scripts\python.exe

■ Core Installed Packages (excerpt from pip freeze)

Package	Version / Source
torch	2.5.1+cu121
torchvision	0.20.1+cu121
torchaudio	2.5.1+cu121
lightglue	GitHub @ 746fac2
numpy	2.2.6
matplotlib	3.10.7
opencv-python	4.12.0.88
kornia	0.8.1
sympy	1.13.1
typing_extensions	4.15.0

■ Verification Result

The test script **test_lightglue_import.py** executed successfully, confirming that PyTorch, OpenCV, Matplotlib, NumPy, and LightGlue imports resolved with no errors. This marks a fully functional development environment ready for LightGlue-based experimentation.

■ Reflection

Day 2 marks the completion of environment setup and verification. This milestone demonstrates understanding of interpreter management, environment activation, and dependency resolution — a foundational step toward applied computer vision engineering.

“Every environment configured with purpose becomes a launchpad for discovery.”
